

INVENTORY MANAGER

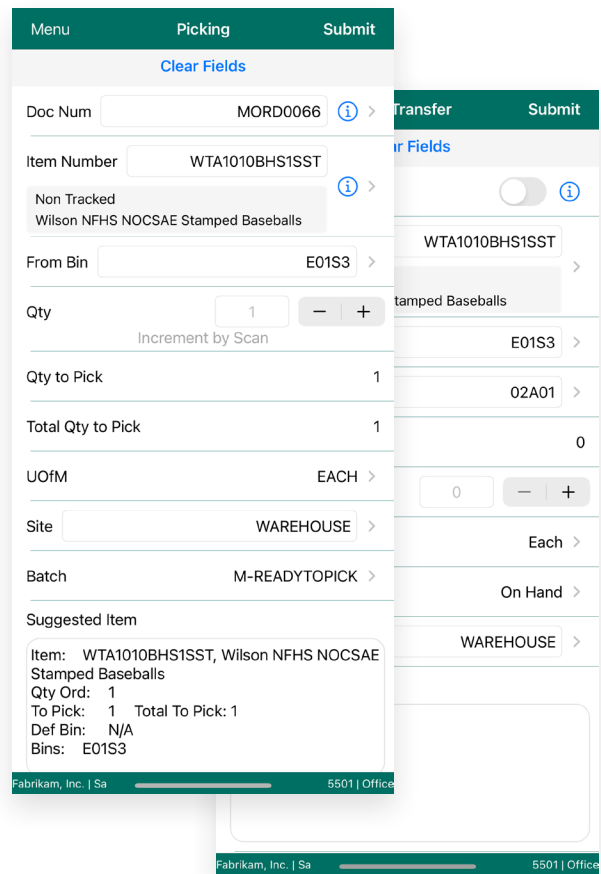

Are you ready to a full year without a mispick?

Fail-Proof Your Inventory Operations

SalesPad® Inventory Manager is your answer to facilitating successful inventory operations. With real-time visibility, you can ensure 100% accuracy when receiving, picking, and transferring inventory. Scan and print barcodes with ease, and seamlessly plug Inventory Manager's data into your distribution software solution for a user experience that's powerfully straightforward. Bring action and analysis into one interface, so you can manage active orders or keep tabs on inventory while it's still on the shelves.

Mobile-ready

Bring data accuracy and real-time visibility to your team with Inventory Manager's mobile features. With handheld barcode scanners, capture inventory data and process transactions at the point of activity. Prevent mistakes with the ease and accuracy of scanning with a mobile barcode reader. Quickly and accurately obtain item numbers, quantities, serial/lot numbers, and other attributes like expiration dates or colors. Then, use the mobile app to view inventory information on the device of your choice.

8 Higher fill rates and happier, more loyal customers

↗ Higher and healthier Gross Margin Return on Inventory Investment

🕒 Faster customer response time and shipping

↘ Fewer returns with scan validation

Key Features

- **Real-time visibility:** Know exactly where your products are and how much quantity is on hand with mobile barcode scanners.
- **Picking:** Avoid mispicks with better picking control through barcode scanning. Pick tickets clearly show which items to scan.
- **Packing:** Easily allocate packing materials and organize inventory into packages for shipping.
- **Shipping:** Up-to-date information ensures that you know where items are after they've been shipped, making it easy to keep track of inventory. Send shipping confirmation information to the customer to automatically notify them of statuses.
- **Powerful inventory controls:** With scan validation, never pick the wrong item or the wrong quantity, guaranteeing order accuracy.
- **Barcode printing:** Create barcoded item, container, and shipping labels with integrated barcode scanners.
- **Mobile app:** Save time and keep inventory information up-to-date by using mobile features while on the shop floor.
- **PO receiving:** Maintain accurate inventory levels with purchase order receiving. Scan in PO items with barcode scanners and stock them in the

| Standard Supported Documents | | |

appropriate location.

- **Auto-print:** Automatically print item labels for certain transactions, such as PO receiving.
- **Receipt confirmation:** Ensure that your orders were shipped and received successfully.
- **Inventory transfer:** Easily transfer items between bins and sites and see quick data updates. Replenishment suggestions ensure that inventory doesn't get too low after a transfer.
- **In-transit transfer:** Maintain control and accuracy while moving in-transit items. The "Via Site" feature shows where items are while on route to their final destination.
- **Serial and lot tracking:** Look up items by lot or serial number and quickly locate items in bins.

Inventory Manager in Action

Inventory Manager is optimized for distributors to

attain total accuracy in their warehousing processes, setting the foundation for true inventory visibility and saving major cash by avoiding mispicks and returned items. Scan products to get accurate stock counts every time, receive purchase orders and automatically create receipts, make inventory adjustments, and much more.

“We actually went a full year without a single mispick. And if someone calls in and wonders whether or not they got an item from us, we can tell them exactly which box to check, and then they usually find the item they thought they didn't have.”

- Jeff Downs, CEO, Hoy Shoe Co.
