DISPATCH

Expert route tracking and management

Save Time, See Green

SalesPad® Dispatch is the ultimate organization tool to manage your drivers and vehicles. By clearly displaying route, truck, and driver schedules, Dispatch makes it easy to spot time-saving delivery options that allow you to more efficiently manage your trucking schedule.

Easily relieve drivers, refine routes, schedule rest stops, and more. View the schedule for one day or for weeks at a time—whatever helps you get the job done. Schedule routes, vehicles, or drivers manually by creating a sales document, or the process by using workflow plug-ins.

Dispatch in Action

After manually creating a route or automatically generating one, users can tie calendar appointments to each stop in the route with the corresponding vehicle and driver. Further improve your route management across your entire organization by utilizing the Dispatch Board feature to optimize multiple schedules.
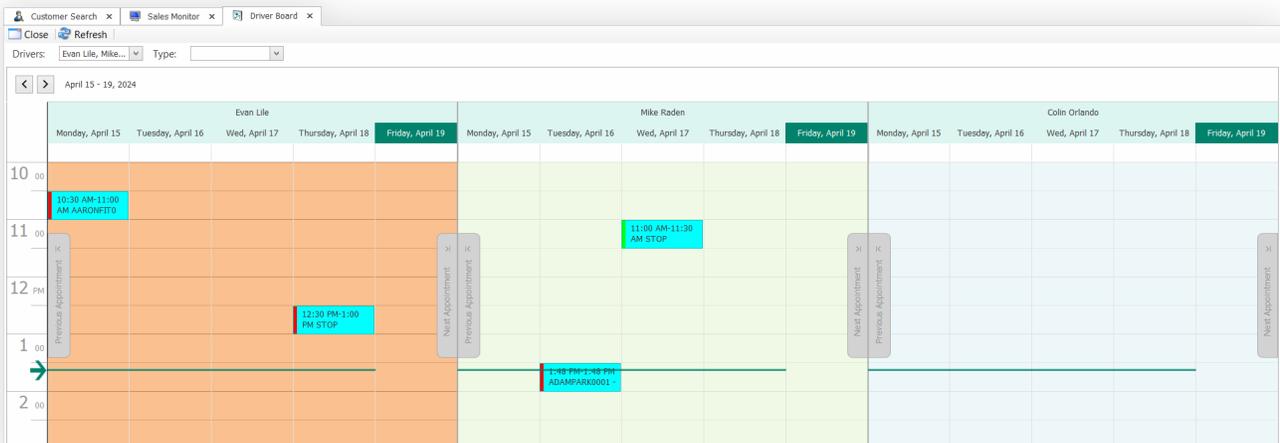

Stop wasting time tracking down shipments

Achieve comprehensive organization for routes, drivers, and vehicles
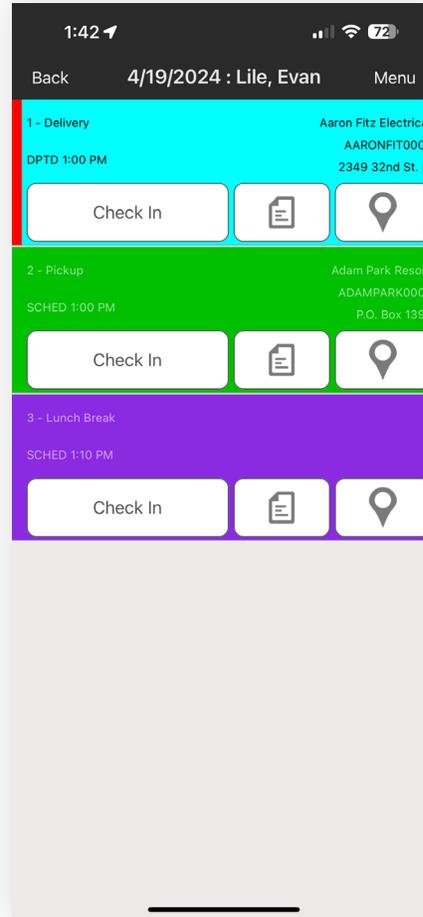

Optimize route schedules

Power Up with Mobile

To maximize the Dispatch features, add SalesPad Mobile to your set of solutions and give drivers the ability to see their routes and check in and out of each stop with the click of a button. While on the go, they can review each stop's sales document, make updates as needed, and get signatures. With mobile accessibility, coordinating an efficient trucking schedule is simpler than ever before.

Key Features

- **Dispatch Board**: The Dispatch Board gives you a visual way to compare schedules for drivers and vehicles. Drag and drop drivers and vehicles onto the board to create the schedule that will keep your company humming along on time.

- **Mobile check-in/out:** Drivers can check in and out of route stops with a single tap, saving time and keeping things updated.

- **Driver profiles:** Create driver profiles, complete with driver's license information, rates, contact information, driver-specific notes, and more, and view each driver's schedule side by side as you create your routes.

- **Vehicle profiles**: Track a vehicle's maintenance schedule, mileage, and more, and easily add or remove vehicles from your scheduled routes.

- **Static routes:** No need to repeatedly enter the same basic information for regularly scheduled routes. Create a static route (a route template), then make any changes to the individual route when it's time to hit the road.

- **Calculate shipping weight:** Dispatch automatically calculates shipping weight data, in addition to other pertinent sales order data, based on the line item information found in linked sales documents. No extra effort required.

- **Simplified scheduling:** Dispatch takes the hair-pulling frustration out of scheduling with built-in scheduling conflict warnings and many other helpful options. Add the Workwave route optimization integration to further streamline your scheduling process.

Empower your drivers to access their route information and check in/out on the go

"One of the things about Cavallo° that impresses me most is its ease of use. You don't need to be an expert in Microsoft ERPs to start benefiting from their solutions immediately."

– Robb Delprado, Senior Presales Architect at Accelerynt Inc
