USER FIELDS

Unrivaled personalization

What is User Fields?

This tool allows you to create and manage user fields within SalesPad®, which are then automatically stored in the SQL database. Enjoy unparalleled customization capabilities and add up to 200 user fields per business item, ensuring that the picture of your business is as complete and accurate as possible.

You should use User Fields if:

–   A one size fits all application does not suit the needs of your business

–   You're looking for an unmatched level of personalization in your software

–   You want a product that accommodates every aspect of your business

What does it look like in action?

Quickly and easily create a user field by choosing from an extensive list of business objects, then define the field properties to your liking. Once created, user fields can be added to a layout of varying complexity, with the option to organize user fields into groups and tabs in advanced layout options. Edit user fields at any time by selecting a business object and revising the field properties as needed, and import data and export user fields at any point.

How can I expand my software tool kit?

User Fields is just one tool in your software tool kit. Build out your complete distribution software solution with Salespad's additional features and modules — including next-level functionality like automated tasks and workflow, CRM tools, EDI, barcoding, and more. Elevate every process of your distribution management, from selling to order fulfillment to shipping and payment collection, and accelerate their efficiency by uniting them under one powerfully flexible solution.
