BINARY STREAM MEM INTEGRATION

Organize every aspect of your company

What is Binary Stream MEM Integration?

SalesPad® Binary Stream MEM Integration empowers GP users to sort and filter essential documents and customer information to ensure complete, comprehensive organization of your business. With this integration, users have the ability to divide their company into facilities, or entities. These facilities can house a variety of assets—such as customers, vendors, and documents—and filter access based on each user's credentials.

You should use Binary Stream MEM Integration if:

- You want greater visibility of your customers, vendors, and documents
- You spend a lot of time searching for customer information
- Your business would benefit from a customizable organization tool

What does it look like in action?

With Binary Stream MEM, you can organize a number of assets into the integration's facilities, including customers, vendors, sales documents, purchase orders, AR transactions, receiving screens, and sales document IDs. With the ability to filter through each facility, users will maximize their efficiency and save time hunting down information, thus leaving them better equipped to direct their efforts toward more revenue-generating activities. Leverage total control, customization, and visibility over all aspects of your business when you implement Binary Stream Integration.

How can I expand my software tool kit?

SalesPad's Binary Streem MEM Integration is just one tool in your software tool kit. Build out your complete distribution software solution with Salespad's additional features and modules — including next-level functionality like automated tasks and workflow, CRM tools, EDI, barcoding, and more. Elevate every process of your distribution management, from selling to order fulfillment to shipping and payment collection, and accelerate their efficiency by uniting them under one powerfully flexible solution.
